Automated peace of mind
Healthcare Identity and Access Management

Healthcare organizations need an identity and access management (IAM) solution purpose-built to meet the unique, demanding, and constantly changing security, compliance, and workflow challenges of the modern healthcare enterprise.

Here's what you get with an IAM solution purpose-built for healthcare.

ACCESS, SECURITY, COMPLIANCE... DAY 1

Eric, Director of IT, relies on role-based access controls, automated provisioning and de-provisioning, and stream-lined auditing and analytics.

All essential to IT ops; transparent to users.

DR. BOB IS RETIRING TODAY... SO IS HIS ACCESS

AND a new group of residents starts today. Can your resource-constrained team move as fast as your workforce changes?

Improve control and security.

HOURS OF OPERATION?

Dr. Valena starts today too. She needs to be up-and-running stat.

Ensure immediate access to vital patient care information.

NO CLICK ACCESS

Provisioning set, Dr. Valena has seamless, instant, and secure access to any desktop, workstation, or app.

She's patient ready.

MOBILE DEVICE ACCESS

Dr. Valena is now in-between patients, checking test results from shared clinical mobile devices with a simple tap of a badge.

Efficiency on the go.

MEDICAL DEVICES. ALTOGETHER CONNECTED

The new residents are learning how secure access to interconnected medical devices lets them read, capture, store, aggregate, and transmit patients' vitals.

PHI protected.

EPCS EASY

Since the hospital's EPCS solution already meets DEA requirements, Dr. Valena prescribes a controlled substance electronically for a patient being discharged.

Convenience. Control. Compliance.

AUDITS? NO WORRIES.

Yikes! A surprise audit. But Eric has automated analytics in place. Reports are just a few clicks away. The hospital is compliant, and he can prove it.

HOME IS WHERE YOUR CHART IS

Fast, convenient, and secure remote access lets Dr. Valena review files from the comfort of home. No need for a road trip to check on patient info.
