

Unlocking the power of the Digital Clinical Workspace

Imprivata and VMware Workspace ONE

Key benefits

- No Click Access® to VMware Horizon virtual desktops
- HIPAA-compliant secure communications integration
- DEA-compliant authentication options for increased EPCS adoption

“By integrating Imprivata, the overall VMware solution is significantly faster and more efficient, allowing clinicians to maintain their focus on delivering high quality patient care.”

- Joshua Wilda, VP of Information Technology, Metro Health

Improve patient care with a unified virtualization approach

An increasing number of healthcare organizations are implementing virtual clinical desktops to streamline workflows and improve care provider productivity.

Imprivata unlocks the power of the VMware® Workspace ONE™ Digital Clinical Workspace™. Imprivata empowers care providers to securely and conveniently access, communicate, and transact patient information, making unified user, desktop, and mobile management a reality.

Streamline workflows across shared workstations

Virtual desktops follow users, maintaining the state of their desktops and applications as they change locations or switch workstations. However, repeated logins can delay providers and negatively impact patient care.

Imprivata delivers No Click Access to VMware Horizon virtual desktops by removing repetitive manual logins and complex passwords, saving up to 45 minutes per shift for every care provider.

With Imprivata, as providers move between their shared workstations, secure communications can be sent across every desktop. This allows care providers to send and receive messages instantly, speeding care coordination and delivering up to 88% improvement in provider response times.

In addition, Imprivata secures DEA-compliant transactions invisibly and without disrupting clinical workflows or patient care. For example, for the electronic prescribing of controlled substances (EPCS), Imprivata eliminates dual workflows for providers, replacing the paper based workflow and increasing overall e-prescribing usage by 85%.

VMware’s Digital Clinical Workspace, along with Imprivata, provides healthcare organizations with a blueprint for a secure Windows desktop and application delivery platform validated with the leading electronic health record and IT infrastructure vendors.

Enable mobile clinical workflows

From hospital rounds, to community home visits, to emergency calls to a doctor at home – care providers need access to real-time protected health information (PHI) and medical data from anywhere, at any time. However, the proliferation of mobile devices and bring your own device (BYOD) policies create a security risk that has healthcare organizations struggling to balance security and convenience.

About Imprivata

Imprivata, the healthcare IT security company, enables healthcare securely by establishing trust between people, technology, and information to address critical compliance and security challenges while improving productivity and the patient experience.

VMware Workspace ONE enables a unified application catalogue that provides a consistent experience across any device and application.

Imprivata takes it a step further by enabling secure transactions from remote access locations and making clinical workflows such as EPCS possible on mobile devices.

The Imprivata mobile application, integrated into VMware Workspace ONE, delivers HIPAA-compliant secure communications allowing providers to confidently communicate PHI to speed up the care process while improving patient outcomes.

Strengthen compliance

Imprivata enables healthcare organizations to effectively safeguard patients' PHI in VMware's Digital Clinical Workspace. Imprivata enables IT staff to define and enforce HIPAA-compliant policies for all activities including automated password changes. With VMware Horizon, Imprivata consolidates control, delivery, and protection of end user compute resources with policies that dynamically adapt to the end user's computing environment.

VMware Workspace ONE helps healthcare organizations meet compliance regulations and operating best practices through data centralization, data loss prevention policies, encryption at rest and in motion, automated compliance and remediation, and remote device wipe.

Easy to implement, deploy, and manage

Imprivata is a certified component of VMware's Digital Clinical Workspace, delivering a problem-free implementation.

Imprivata is appliance-based, simplifying deployment and maintenance. Centralized management of authentication, access control, and auditing reduces administrative overhead and eliminates password-related help desk calls. VMware Horizon takes advantage of modern desktop and application delivery architecture that delivers desktops in seconds and reduces storage and operational costs.

For healthcare organizations in the early stages of introducing virtual desktops or executing a phased roll-out, Imprivata eases the physical-to-virtual transition and promotes clinical adoption. The solution also provides a consistent user experience across physical and virtual environments, facilitating easy transition and minimizing the need for end user training.

Balancing security and convenience

With Imprivata, clinicians no longer need to choose between security and convenience. Imprivata enables clinicians to accurately identify patients and access, communicate, and transact patient data securely and conveniently. Our solutions balance strong security standards with clinical workflow requirements, enabling care providers to spend more time focusing on patients and less time dealing with technology. VMware Horizon leverages virtual networking to simplify and dynamically protect data center infrastructure and workloads. Providers reclaim efficiency, patients enjoy better care delivery, and everybody's security is protected – exactly as it should be.

About Imprivata

Imprivata, the healthcare IT security company, enables healthcare globally to access, communicate, and transact patient information, securely and conveniently. The Imprivata platform addresses critical compliance and security challenges while improving productivity and the patient experience.
